Based

Regenerative

- Sustainability advocacy
- Business, planet and people
- Sustainability innovation investment

Green Maturity Assessment
Where does this challenge sit on the Green Spectrum?

- Is this challenge about reducing harm, transforming systems, or regenerating ecosystems and communities?

☐ Harm reduction (Light Green)
☐ Systemic change (Mid Green)
☐ Regeneration and social-ecological alignment (Dark Green)

- Does solving this challenge involve meeting existing standards, redesigning value chains, or redefining our relationship with nature?

☐ Standards/compliance (Light Green)
☐ Redesign/systemic innovation (Mid Green)
☐ Deep regeneration/justice (Dark Green)

- If we succeed, does this make the organisation compliant, resilient, or a regenerative leader?
☐ Compliant (Light Green)

☐ Resilient/systemically circular (Mid Green)
☐ Regenerative leader (Dark Green)

Complexity Assessment
What Level of complexity are we dealing with?

- Is there a known, proven solution to this problem, or does it require expert analysis, experimentation, or immediate crisis response?

☐ Known, repeatable (Simple)
☐ Expert analysis needed (Complicated)
☐ Requires learning through doing (Complex)
☐ Urgent stabilisation required (Chaotic)

- How much certainty do we have about both the problem and potential solutions?

☐ High certainty (Simple)
☐ Partial certainty, with known unknowns (Complicated)
☐ High uncertainty, patterns only emerge over time (Complex)
☐ Total uncertainty, immediate action required (Chaotic)

- Would applying a standard technical solution likely work, or could it make things worse?

☐ Standard solution fits (Simple/Complicated)
☐ Standard solution risky or harmful (Complex/Chaotic)

This sits beside or slightly above the Cynefin framework visual for easy reference.

- Is there group disagreement on placement?
- Where is the uncertainty highest?
- Do we need more system mapping before moving to prototyping?
