

Each section includes a key guiding question, followed by 4 maturity levels (White, Light Green, Mid Green, Dark Green), reflecting organisational progress from knowing to regenerative leadership.

1. Strategy and Purpose Alignment

- Question: Is sustainability embedded in the strategic vision and purpose of the organisation?**
- White: No stated sustainability goals or long-term environmental considerations in business strategy.
  - Light Green: Mission includes sustainability language; compliance-driven ESG goals aligned with reporting standards.
  - Mid Green: Purpose integrates sustainability into core business goals and value proposition across departments.
  - Dark Green: Strategy is regenerative by design, aiming to restore ecosystems and social systems, influencing industry norms.

2. Governance and Leadership

- Question: How is sustainability governed and led at senior levels?**
- White: No governance mechanisms for sustainability; no responsibility assigned.
  - Light Green: Board-level oversight with sustainability KPIs; sustainability lead or committee appointed.
  - Mid Green: Sustainability embedded into executive performance, risk structures, and board incentives.
  - Dark Green: Leadership acts as public advocates for transformation; board includes non-human and intergenerational representation.

3. Organisational Culture and Engagement

- Question: How embedded is sustainability in the organisation's day-to-day culture and behaviour?**
- White: No awareness of sustainability at operational or staff level.
  - Light Green: Ad-hoc training and awareness campaigns on compliance and reporting.
  - Mid Green: Structured employee engagement programmes; sustainability champions across departments.
  - Dark Green: Culture of learning, activism, and ownership; rituals support regenerative decision-making.

4. Stakeholder Engagement and Co-Design

- Question: How are stakeholders engaged in shaping the sustainability agenda?**
- White: Stakeholders seen only as passive recipients or blockers.
  - Light Green: Surveys and annual reports published for investors and regulators.
  - Mid Green: Regular co-creation sessions with communities, suppliers, users, and workers.
  - Dark Green: Deep, long-term participatory design processes; affected communities shape governance.

5. Materiality and Systems Risk Mapping

- Question: How effectively does the organisation map and prioritise material issues and systemic risks?**
- White: No materiality or risk mapping undertaken.
  - Light Green: One-time materiality assessment aligned to global standards.
  - Mid Green: Dynamic systems mapping tools used to monitor interconnected risks.
  - Dark Green: Full feedback loop model connecting planetary boundaries, tipping points, and justice metrics.

6. Transparency and Accountability

- Question: How transparent and accountable is the organisation for sustainability performance?**
- White: No public disclosures or performance tracking.
  - Light Green: Basic annual ESG disclosures, static dashboards.
  - Mid Green: Third-party verified, impact-driven metrics published in real time.
  - Dark Green: Transparent open data ecosystems, participatory auditing with communities and NGOs.

7. Metrics and Impact Measurement

- Question: Are metrics focused on short-term outputs or long-term, meaningful impact?**
- White: No metrics or only financial ones tracked.
  - Light Green: Carbon, waste, water tracked at Scope 1 and 2 level.
  - Mid Green: Scope 3, social equity, biodiversity and circularity indicators used.
  - Dark Green: Measures of ecosystem regeneration, wellbeing, community wealth, and intergenerational justice.

8. Product and Service Innovation

- Question: Are sustainability criteria influencing the design and delivery of products and services?**
- White: Products designed for market fit and profitability only.
  - Light Green: Eco-efficiency improvements (e.g. lighter packaging).
  - Mid Green: Circular design principles adopted across all new products or services.
  - Dark Green: Products act as regenerative interventions in the world (e.g. restoring biodiversity, enabling local economies).

9. Operational Integration and Circularity

- Question: How embedded is sustainability in core operations and supply chains?**
- White: Sustainability is treated as external to operations.
  - Light Green: ISO certifications, carbon audits, or procurement checklists in place.
  - Mid Green: Supply chain redesigned for circularity, resilience, and traceability.
  - Dark Green: Operations designed as closed-loop, zero-waste, and restorative to local ecosystems.

10. Finance, Budgeting and Investment

- Question: How are capital flows aligned with long-term sustainability and regeneration?**
- White: No dedicated budgets or sustainable financial products.
  - Light Green: Green bonds or ESG screens used in treasury activities.
  - Mid Green: Internal carbon pricing; investment criteria favouring impact-first outcomes.
  - Dark Green: Redirecting capital to repair ecosystems, social innovation, or planetary infrastructure.

11. Data Systems and Digital Enablement

- Question: How is digital technology used to enhance sustainability tracking and action?**
- White: No data captured on environmental or social metrics.
  - Light Green: Spreadsheets or third-party platforms for emissions tracking.
  - Mid Green: Integrated data systems for real-time ESG reporting across business units.
  - Dark Green: AI and digital twins used for regenerative modelling, forecasting, and citizen science.

12. Policy and Regulatory Alignment

- Question: How well does the organisation respond to and shape evolving policy landscapes?**
- White: No awareness or tracking of sustainability-related policy.
  - Light Green: Compliance with existing mandatory frameworks (e.g., CSRD).
  - Mid Green: Internal working groups align future strategy with regulatory shifts; proactive lobbying for just transition.
  - Dark Green: Leads policy co-creation; transparent advocacy for equity-based, regenerative legislation.

13. Collaboration and Ecosystem Partnerships

- Question: How strategically does the company partner with others to drive systems change?**
- White: Operates in isolation or competition with peers.
  - Light Green: Member of sustainability networks or certification schemes.
  - Mid Green: Strategic alliances with supply chain partners, academia, and NGOs to build circular infrastructure.
  - Dark Green: Actively builds coalitions for systemic transformation; invests in commons-based governance.
