

Light Green - Compliance/Less Harm (ESG)

Complex

Cause-effect only understood in hindsight; requires experimentation

- Coordinate cross-departmental data (HR, ops, finance)
- Translate frameworks into practical internal policies
- Engage suppliers to measure Scope 3 emissions
- Motivate energy-saving behaviour across teams
- Trace informal supply networks
- Address value misalignment in global partnerships
- Manage internal resistance or green fatigue in teams

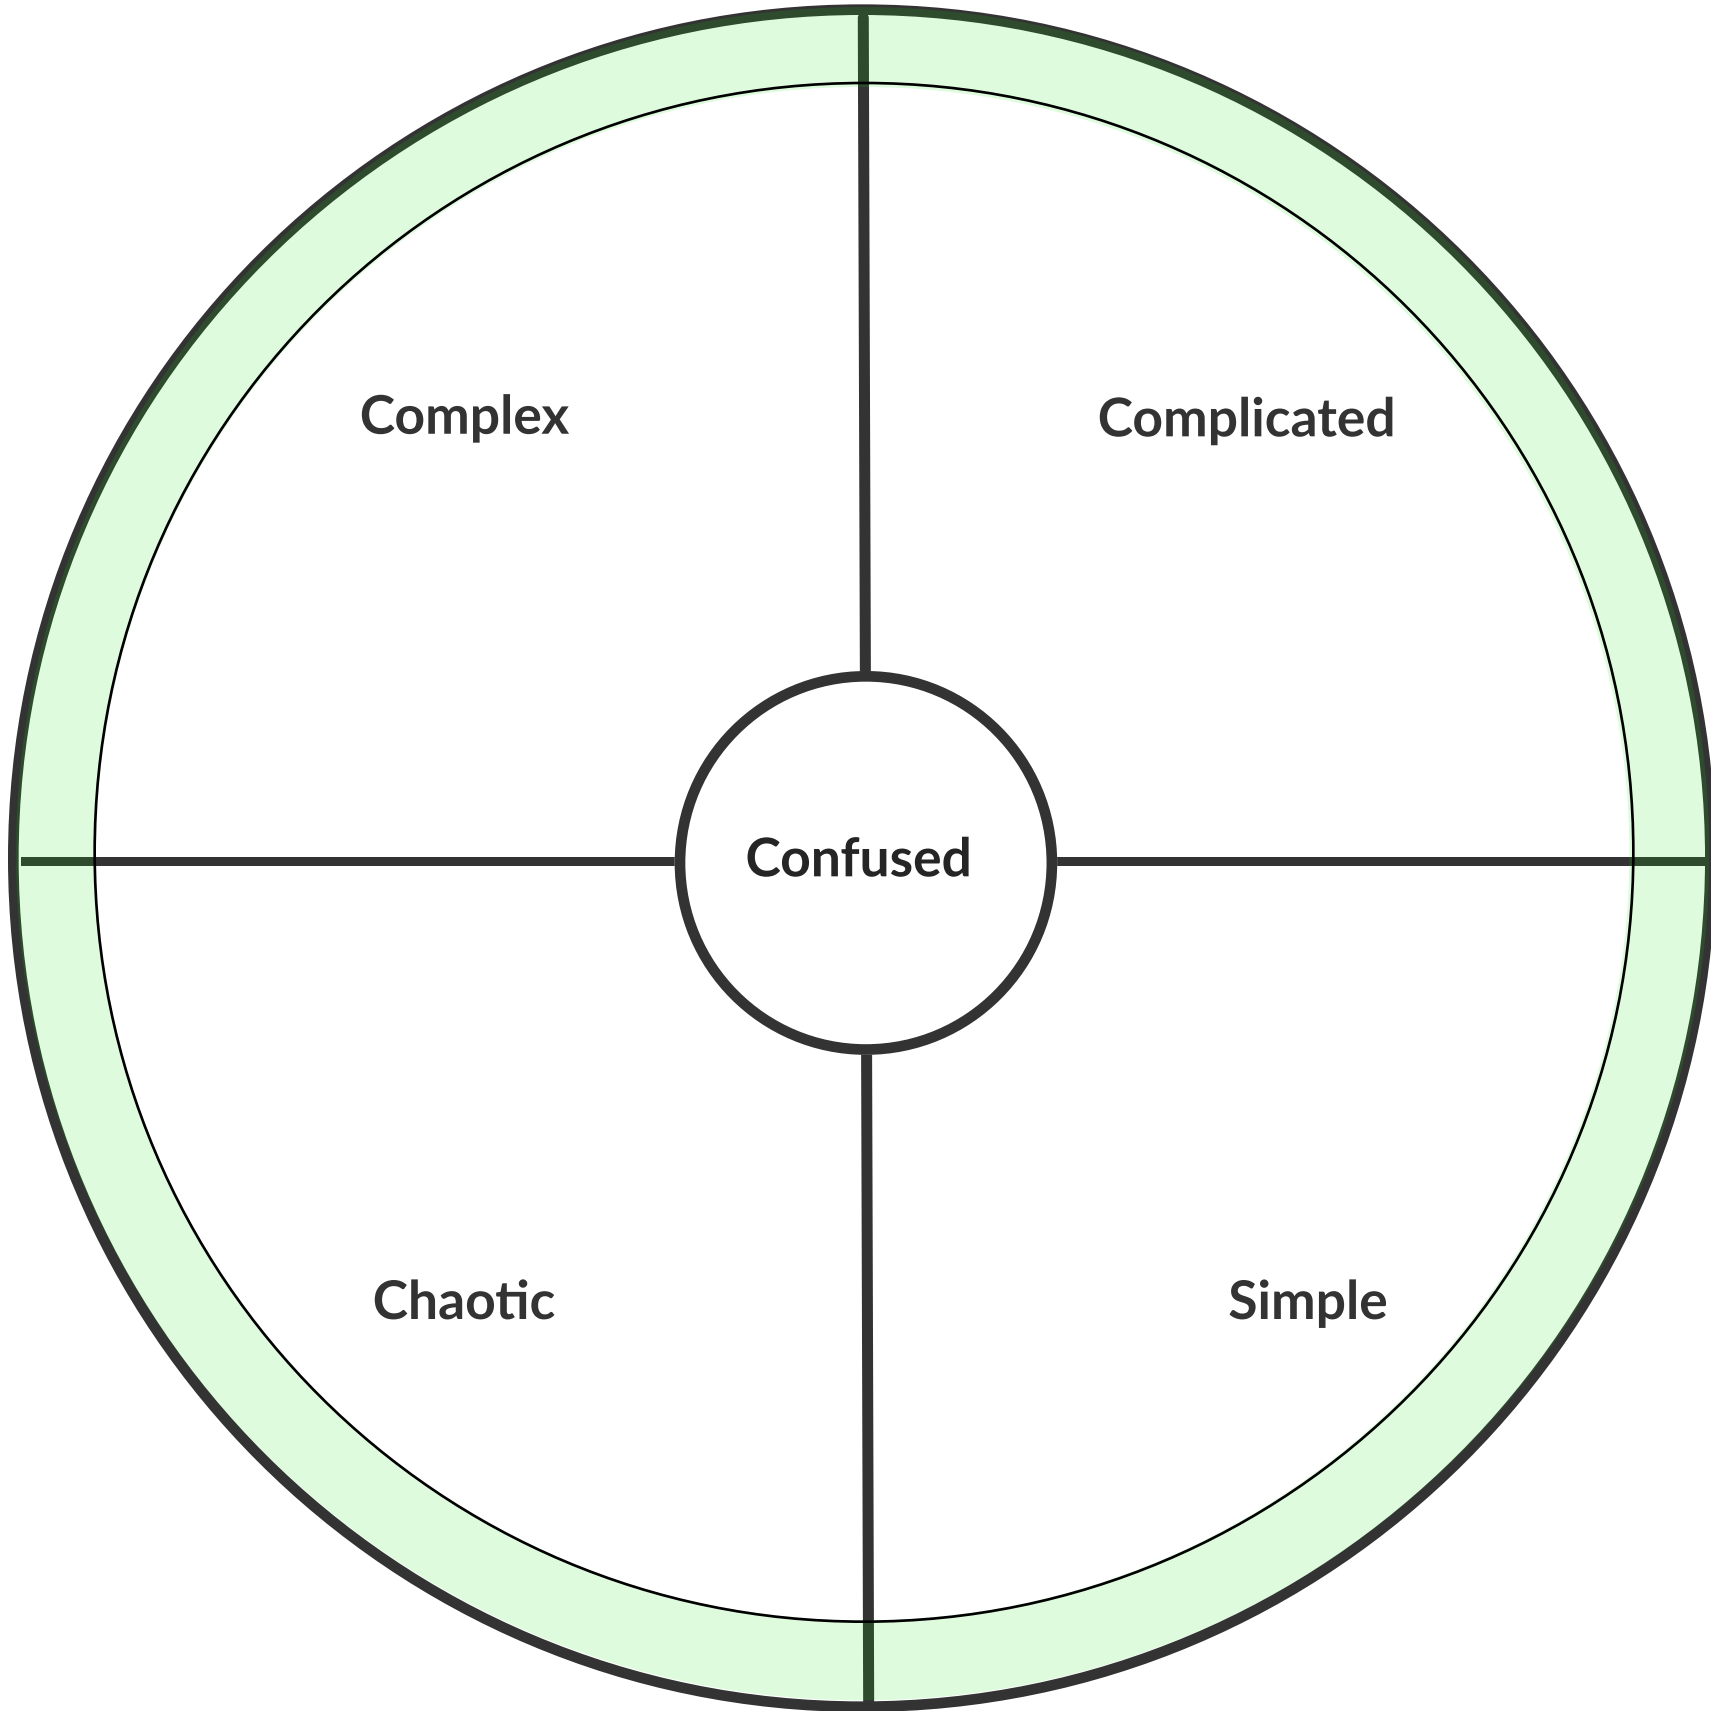

Chaotic

Immediate action needed; unpredictable; often crisis-driven

- React to energy shortages or utility crises
- Address breakdowns in waste management that breach laws
- Contain fallout from ESG-related misinformation or greenwashing claims

Compliance/Less harm (ESG)

- Alignment
- Education
- Setting foundations and transparency

Confused/Disorder

State of confusion; unsure which type of issue it is

- No clear ownership or understanding of ESG reporting
- Data is scattered or missing; frameworks unfamiliar
- No supplier visibility or due diligence system exists

Complicated

Requires expert analysis or planning, but solutions exist

- Select and apply relevant ESG frameworks (e.g. GRI, CSRD)
- Align ESG metrics across departments or regions
- Establish baseline emissions by asset or business unit
- Perform waste audits and energy efficiency reviews
- Run supplier assessments on ESG policies and risks
- Align partner policies with internal governance goals
- Adapt ESG communications to job roles and functions

Simple (Clear)

Straightforward issues with known solutions

- Track Scope 1 & 2 emissions regularly
- Assign staff roles for ESG data collection
- Use standard ESG reporting templates
- Install basic meters and track utility bills
- Conduct simple waste tracking via receipts or invoices
- Ensure documentation of minimum labour standards
- Provide basic sustainability onboarding during hiring
